Independent verifier

A single file that works without connecting to this platform: open it on your computer, load the “event and proof” file downloaded from the passport and read the outcome. The comparison with the public network is made directly by your browser.

https://dactacore.com/verificatore

How verification works

Verification recomputes the event fingerprint, checks the company’s signature, rebuilds the batch root with the inclusion proof and compares it with the one recorded on the public network. You can repeat it yourself, without this platform, using the independent verifier.

Registry contract

Network	Registry contract	Address that records the roots
Polygon Amoy (rete di prova) (80002)	0x9a28fEa6e92f1F0A9d7DeeF30377fEDB0cD01FD9	0x56C2Ba3837100b2227B77a3F08EA0FC1e2565C92
